

OAUTH2 Authentication with GitHub

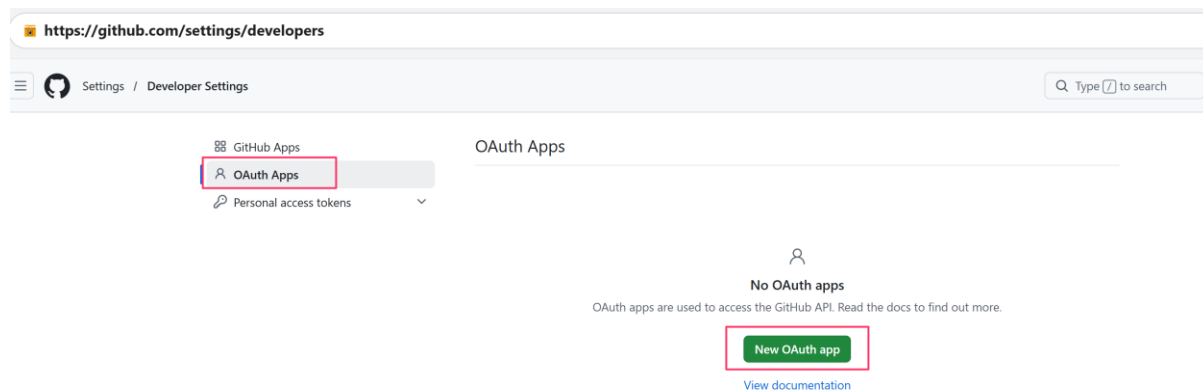

Step 1: Create GitHub Account

Create a GitHub account if you don't already have one.

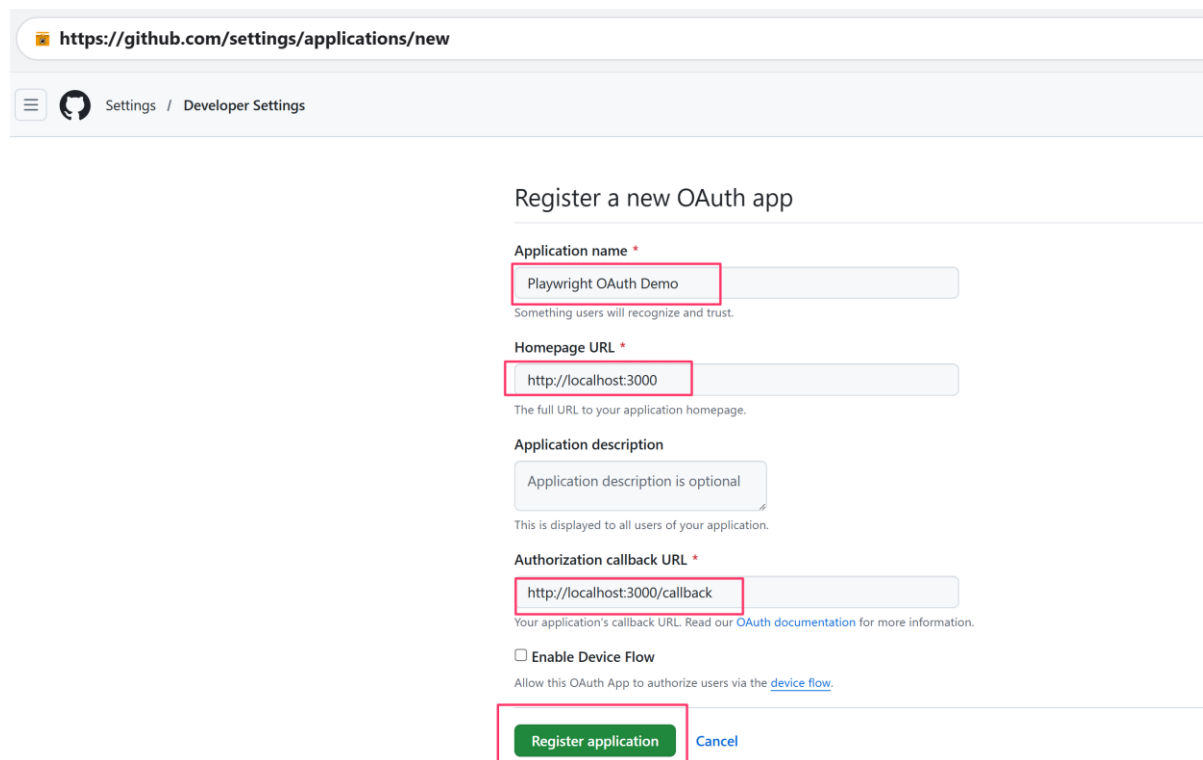

Step 2: Create OAuth App and get Client ID & Client Secretes.

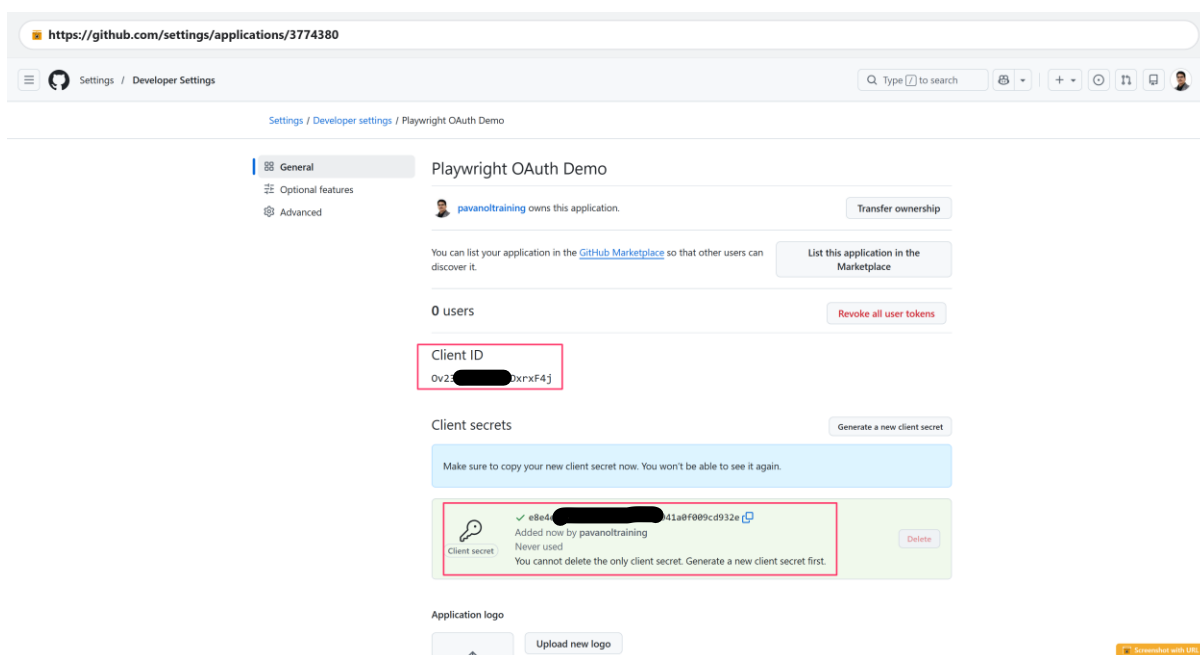

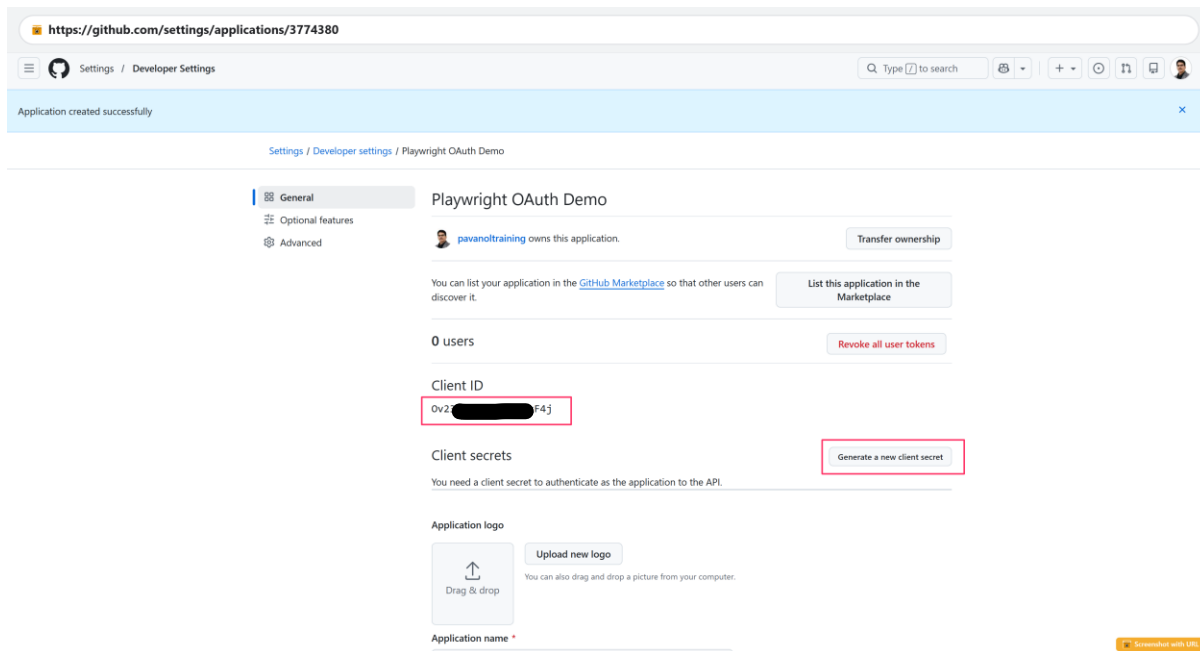

Login to GitHub

Settings → Developer Settings → OAuth Apps → New OAuth App

Fill the details.

Step 3: Request Authorization Code by opening the URL On the browser

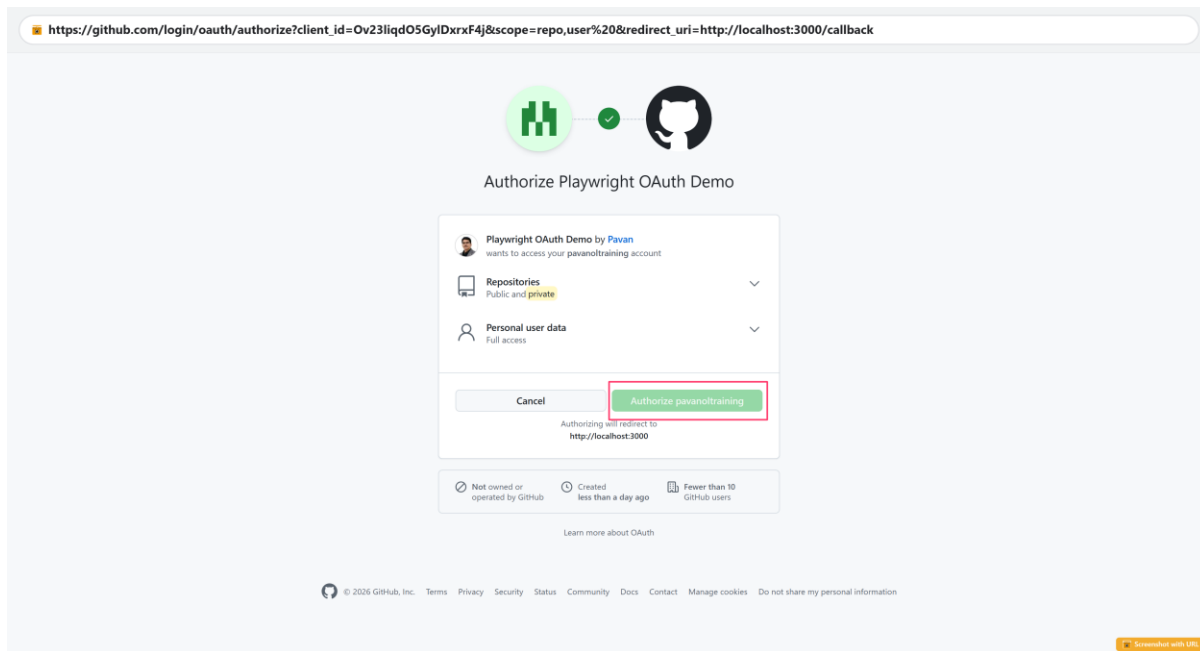

https://github.com/login/oauth/authorize?client_id=YOUR_CLIENT_ID &scope=repo,user &redirect_uri=http://localhost:3000/callback

GitHub redirects to :

<http://localhost:3000/callback?code=123456>

<https://www.pavanonlinetrainings.com>

<https://www.youtube.com/@sdetpavan>

Capture Authorization code from the URL.

Step 4: Exchange Authorization Code for Access Token

Send POST request

https://github.com/login/oauth/access_token

Headers

Accept: application/json

Body

```
client_id
client_secret
code
```

Response

```
{
  "access_token": "gho_XXXXXXXXXXXXXXXXXX",
  "token_type": "bearer",
  "scope": "repo,user"
}
```

Now you have your OAuth2 token.
